My team tracking application

Description:

Application allows to track time that a team of developers spend on a task.

Technology stack:

CSS, JSP, Spring framework, Servlets, Java, MySQL.

Features:

Only admin can add/remove/edit users. Admin's credentials are saved in a userdb data base, table authentication. On the first page user must enter admin's login and password in order to proceed. Authorization is handled by Spring Framework.

After authentication, user can:

1. View the existing team which is stored in userdb data base, table user. Displaying is handled by Servlet technology.
2. Add a new member. The application will add a new member to userdb data base, table user. Adding is handled by Servlet technology.

Next page lists all the members. There are three options available:

1. Add a new member. In this case the app will redirect the user to the previous page.
2. Remove memeber. Application will delete selected member in the db with immediate update of the page. Removing is handled by Servlet technology.
3. Edit member. Application will allow the user to modify selected members login and hours and update the member in db. Editing is handled by Servlet technology.
